Projects

1.Fireboltt Service [↗](#)

Role: Front-end Developer

Technologies Used: React.js, .net Core, MUI, Redux, React-Print.

- Designed and developed the **front end** using **React.js**, creating a seamless, intuitive user interface for service management.
- Implemented features for managing service tickets, tracking repairs, and updating customers in real-time.
- Built and maintained scalable back-end services with **.NET Core** to ensure seamless functionality.
- Optimized performance and ensured robust API integration for efficient data handling.

2. XTRAPP [↗](#)

Role: Full Stack Developer

Technologies Used: Next.js, React.js, Node.js, MaterialUI, MongoAtlas

- Official Website Development: Designed and built the company's official website using Next.js, focusing on performance, SEO optimization, and responsive design.
- Dashboard Implementation: Created a comprehensive dashboard for user management, including role-based functionality for single and multiple user role edits, deletions, and updates.
- Approval Workflow: Developed a hierarchical approval system for staff actions, ensuring that changes and updates followed the correct managerial approval process.

3. FOS

Role: Frontend Developer

Technologies Used: React.js, RESTful APIs,Material UI

- Role-Based Implementation: Developed a robust role-based access control system to manage user permissions effectively, ensuring that users could only access features relevant to their roles.
- User Approval Workflow: Developed a hierarchical approval system for user requests, such as product update, delete, edit, add or leave actions, ensuring streamlined and secure processing of approvals.
- Frontend Enhancements: Improved the existing website's front-end using React class components, enhancing user experience and site performance.
